

# **REAL TIME TRAFFIC ANALYSIS**

**BDM 1034 - Application  
Design for Big Data**

# Industry Overview

The transportation industry is critical to economic productivity and urban mobility but faces significant challenges in managing traffic congestion and road safety. According to recent studies, traffic congestion costs U.S. cities over \$120 billion annually in lost productivity. Real-time traffic analysis can optimize transportation flow, reduce accidents, and improve commuter experience.

***Problem:*** Urban traffic congestion and accident rates remain high, especially during peak hours. This impacts commuter safety, productivity, and environmental health. ***Objective:*** Develop a real-time traffic analysis solution to identify high-congestion areas and suggest optimal routing to reduce delays and improve safety.

***Target Audience:*** Commuters, city transportation departments, and emergency responders.

# Differentiation

*Existing Solutions:* Many apps provide basic traffic info but lack detailed accident prediction and data insights.

*Our Solution:* Integrates accident data and real-time traffic flow to provide:

- Predictive analysis on high-risk areas.
- Proactive alerts for commuters.
- Adaptive routing based on real-time conditions and historical patterns.

# Data Gathering

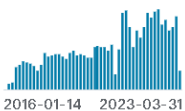

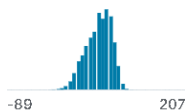

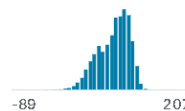

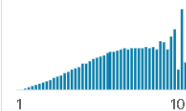

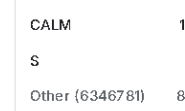

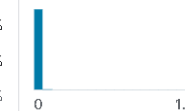

*Primary Dataset:* Kaggle's US Accident Dataset, which includes information on accidents, weather, location, and time.

*Data Collection Plan:*

- Historical accident data (2016-2023).
- Real-time feeds from Google Traffic, weather APIs. *Key Variables:* Location, accident severity, weather, road type, traffic volume.

## DATA NEEDED FOR TRAFFIC PREDICTION

📅 Weather_Timestamp Shows the time-stamp of weather observation record (in local time).	# Temperature(F) Shows the temperature (in Fahrenheit).	# Wind_Chill(F) Shows the wind chill (in Fahrenheit).	# Humidity(%) Shows the humidity (in percentage).	# Pressure(in) Shows the air pressure (in inches).	# Visibility(mi) Shows visibility (in miles).	▲ Wind_Direction Shows wind direction.	# Wind_Speed(mph) Shows wind speed (in miles per hour).	# Precipitation Shows precipita amount in inches there is any.

# Screenshot of Dataset

# Final Output

The final dashboard will display:

- Real-time traffic heat maps and congestion levels.
- Accident predictions and risk zones.
- Optimized routing suggestions for drivers and insights for traffic authorities.

reduce concentration

### Industry Op

Traffic lights in Boston  
can detect congestion for  
in real-time and GPS.

### Unique Appra

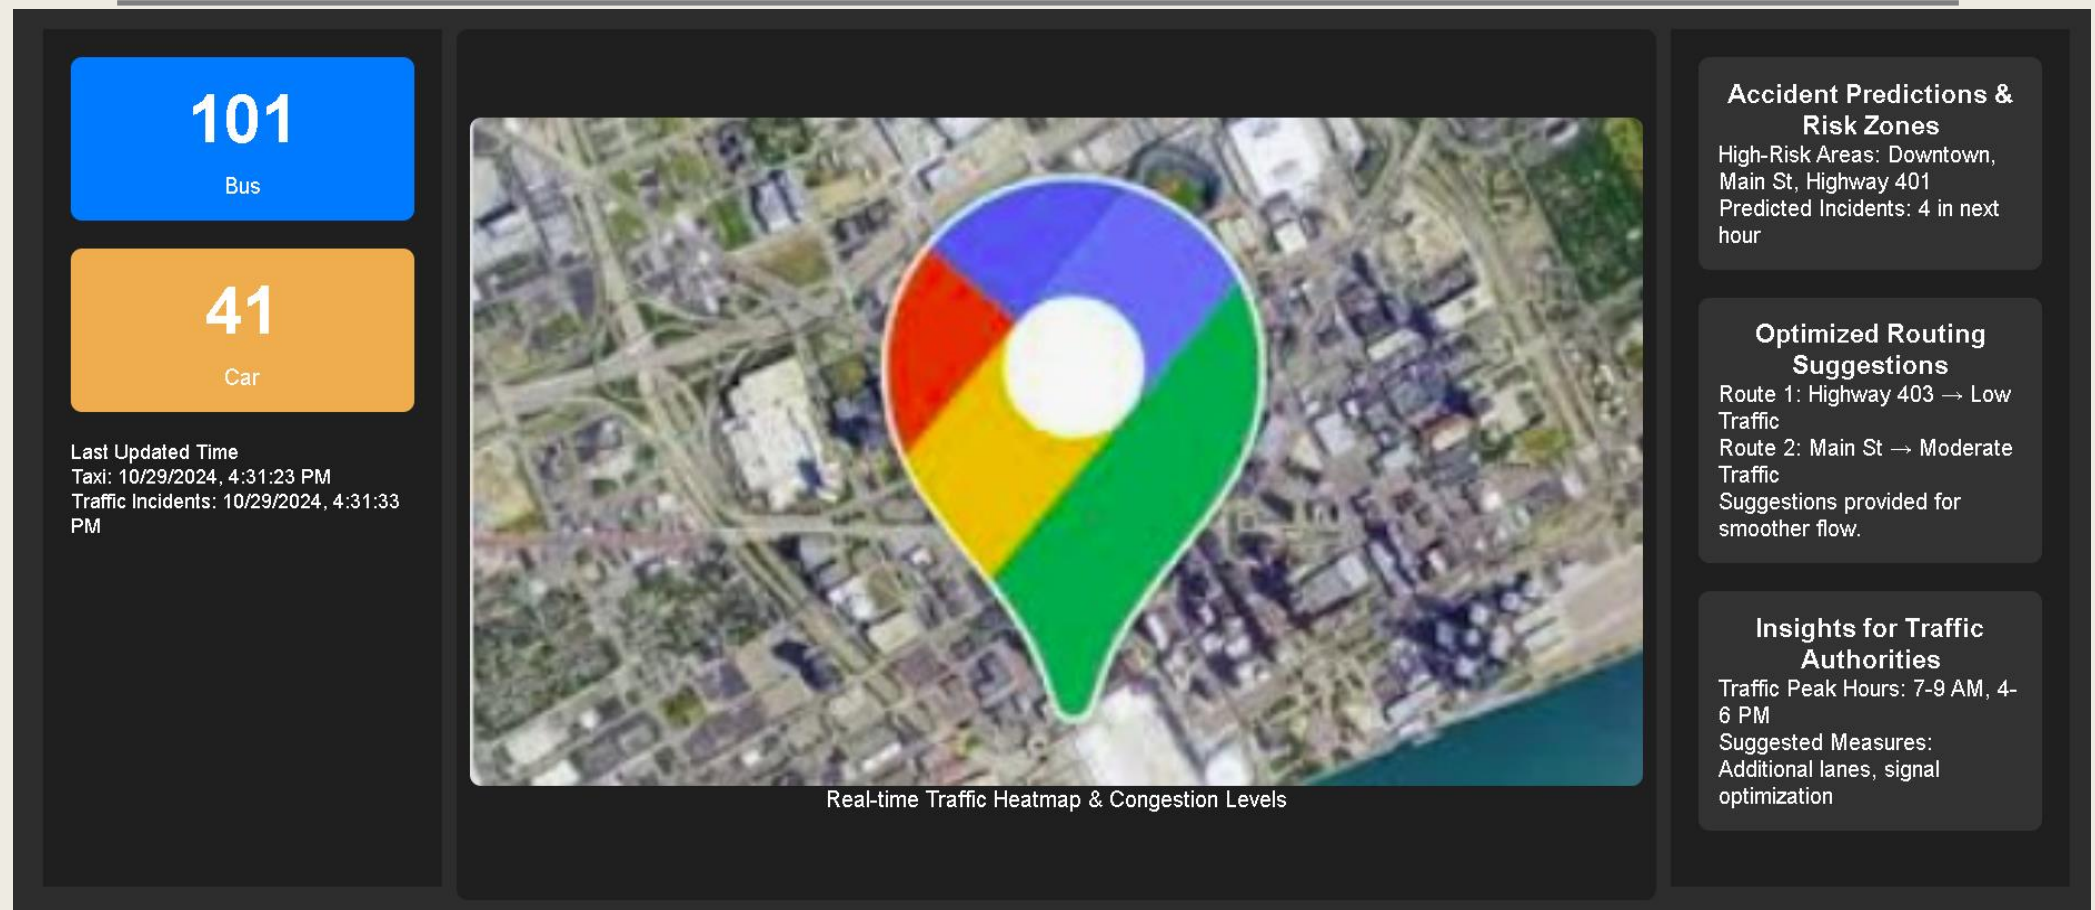

Use of real-time data  
optimization can be used  
to reduce traffic congestion.

### Impact

Unintended consequences  
of intelligent transportation  
systems can reduce congestion.

# The end-result might look like this

**Does Driver  
Behavior's  
matter?**

## The Majority of Residents Say There is a Traffic and Congestion Crisis in the Greater Toronto and Hamilton Area.

Four in ten who commute say that it takes more time to get to work or school, compared to just one year ago.
